

# Using Synthetic Image Generation to Reduce the Cost of Vision Algorithm Development

Clark Dorman, Next Century Corporation

Oct 2, 2013

# What is a Car?

(...or, what does a car look like? What are the features?)

# But These Are Also Cars

# What About Environmental Conditions?

- Taking the picture is the easy part!
- Now, annotate the images
  - Draw a box around each car, or
  - Draw an outline around each car
  - Store the information in a metadata file

- Caltech 101 and Caltech 256  
([http://www.vision.caltech.edu/Image\\_Datasets/Caltech101/](http://www.vision.caltech.edu/Image_Datasets/Caltech101/))
  - 101: 101 classes, 40 to 800 images per class
  - 256: 256 classes, 30607 images, up to 850 images per class
- Pascal Visual Object Classes (VOC) Challenge  
(<http://pascallin.ecs.soton.ac.uk/challenges/VOC/>)
  - Challenges from 2006 to 2102
  - Up to 20 classes, 11,530 images, 23,374 annotated objects
- Pascal VOX 10x (<http://vision.ics.uci.edu/datasets/>)
  - 11 categories 10 times as many images as VOC
- LabelMe (<http://labelme.csail.mit.edu/Release3.0/>)
  - Thousands of classes and instances, grouped by Collection
  - Annotation tool
- ImageNet (<http://www.image-net.org/>)
  - Class hierarchy based on WordNet, 21,841 synsets, 14,192,122 images

# How Many Do You Need Anyway?

40 is too few, but ...

From: Griffin, G. Holub, AD. Perona, P. The Caltech 256.  
Caltech Technical Report  
[http://www.vision.caltech.edu/Image\\_Datasets/Caltech256/](http://www.vision.caltech.edu/Image_Datasets/Caltech256/)

6000 is not much better than 2000

From: Xiangxin Zhu, Carl Vondrick, Deva Ramanan, Charless Fowlkes.  
“Do We Need More Training Data or Better Models for Object  
Detection?” British Machine Vision Conference (BMVC). Surrey, UK,  
September 2012. <http://web.mit.edu/vondrick/largetrain.pdf>

Unfortunately ...

- Depends on the object
- At least 500 to 1000
- Keep training until it levels off  
→ But watch out for overtraining

- Must cover the range of object
  - Size, shape, orientation, color, condition
- Must cover the range of environments
  - Range to object, lighting, rain / snow
- Should not repeat between training / validation / testing

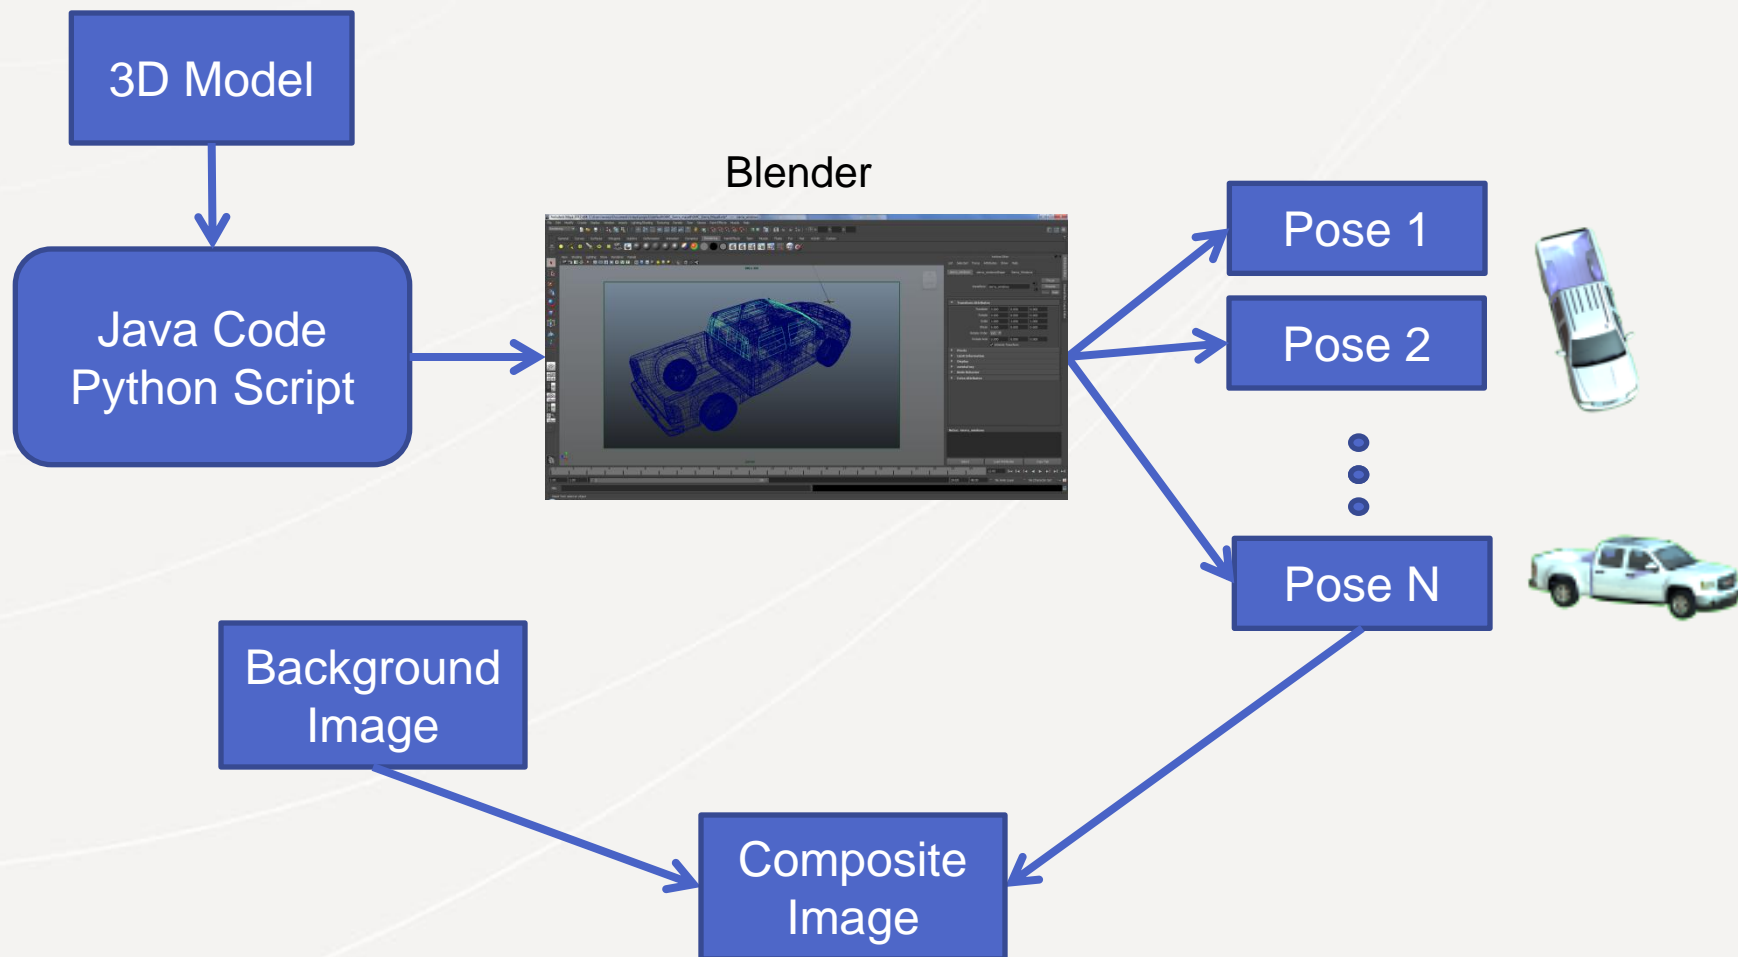

From: <http://www.fxguide.com/featured/real-steel-case-study-in-cgi-live-action-integration/>

Hollywood has been doing this for years

# Create Our Own (On a Budget)

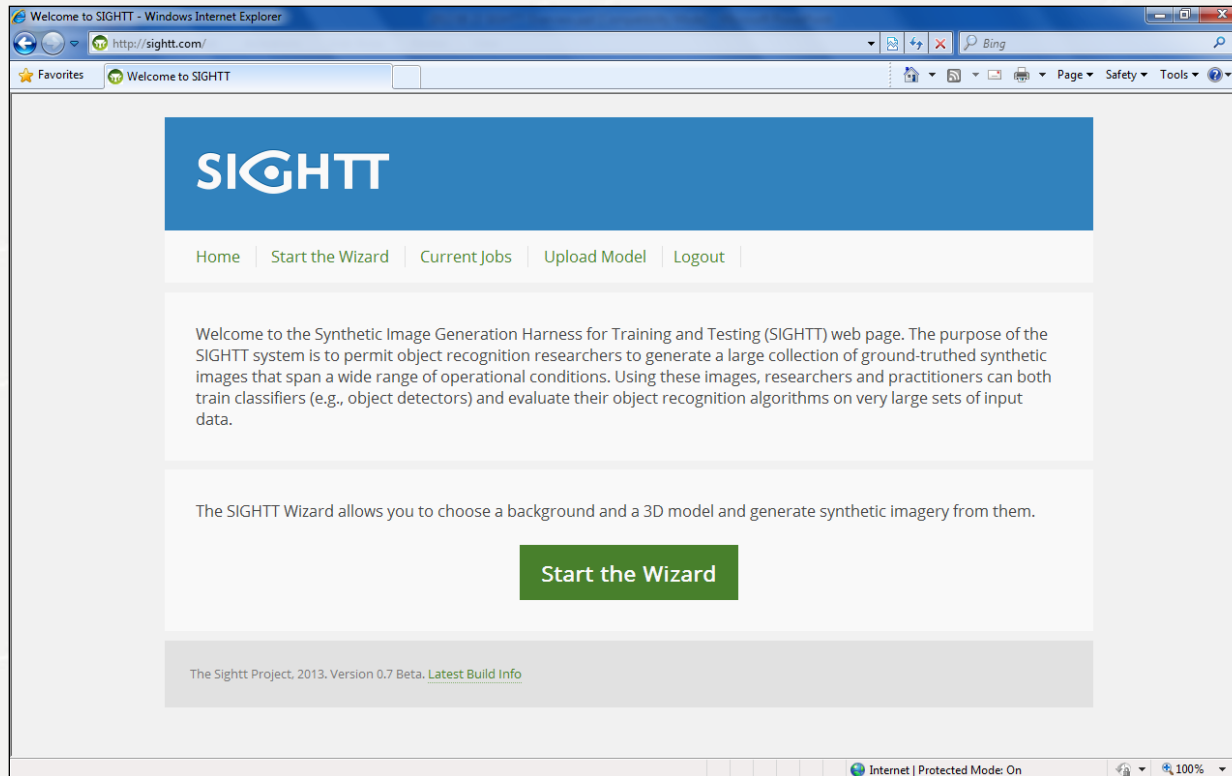

# Create Our Own (On a Budget)

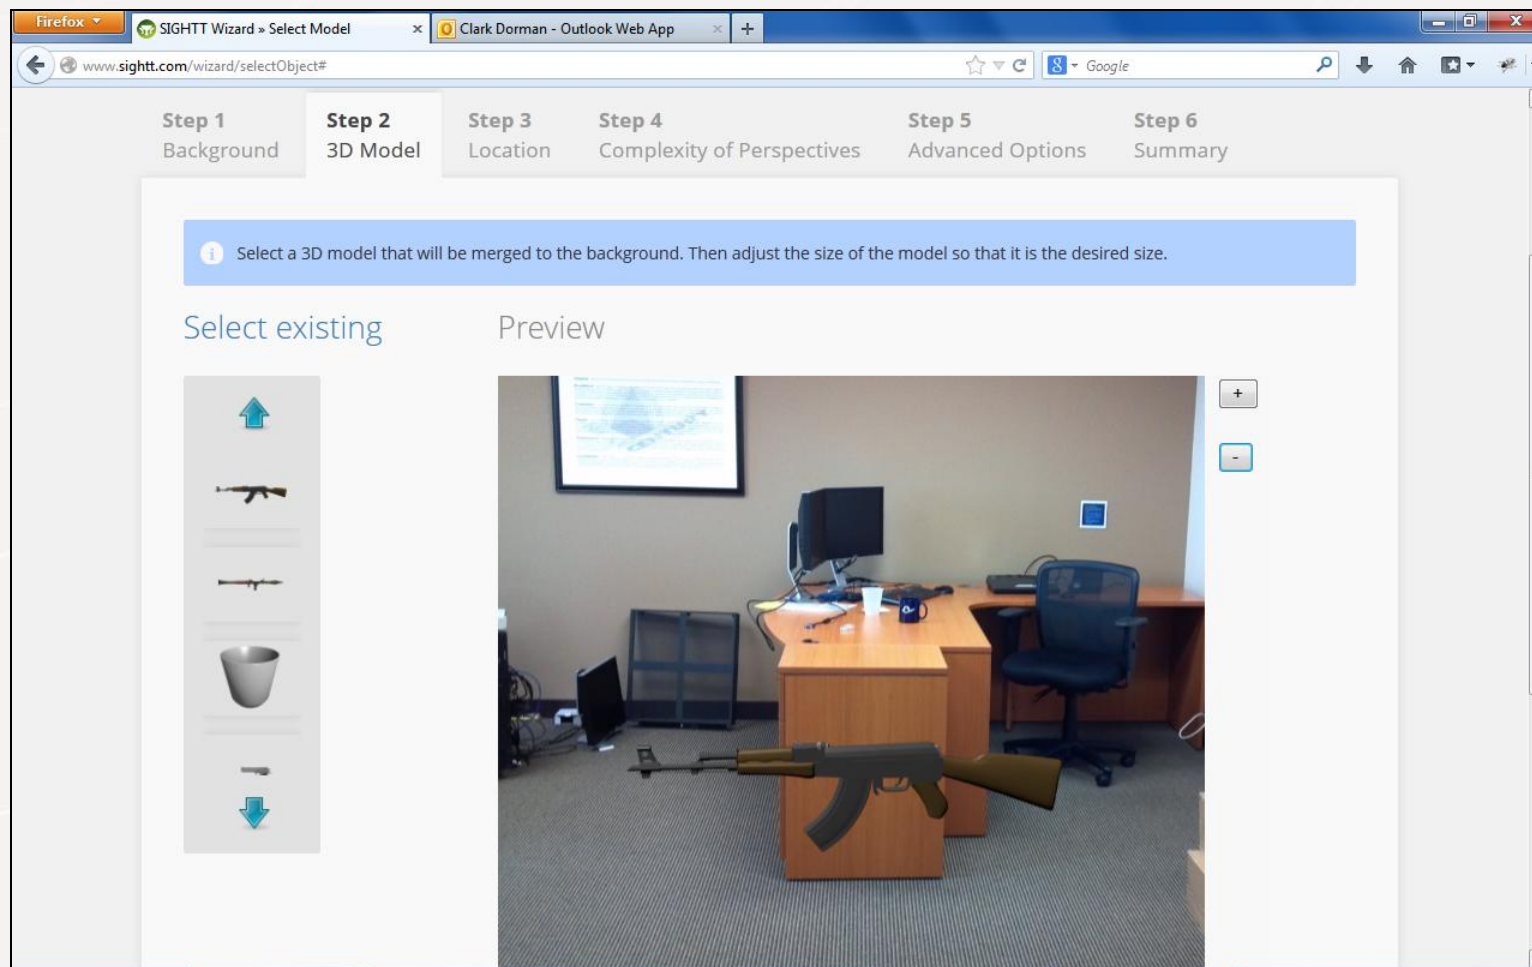

- SIGHTT—Synthetic Image Generation Harness for Training and Testing
- Built on Amazon Elastic Compute Cloud and S3

# SIGHTT Wizard Interface

- Pretty much any object you want

```

      <x>257</x>
      <y>843</y>
    </pt>
  </polygon>
</object>
</annotation>
```

- Adding bit by bit
- In work or done:
  - Edge matching
  - Color and brightness histogram matching
- Planning on
  - Color variation
  - Camera model
  - Lighting
  - 3D environment
  - Shadows
  - Occlusion
  - Haze, dust, rain, snow

# Why Does Realism Matter?

Without Edge Matching

With Edge Matching

# Why Does Realism Matter?

Without Edge Matching

With Edge Matching

Large numbers of SIFT features appear on poor edges

# Does Training on Synthetic Imagery Work?

- Active area of research
- Limited evaluation indicates ‘Yes’
- Comparison:
  - **Real**: Real training images
  - **Composite**: Shadow inserted into imagery
  - **Shadow**: Basic plus shadow
  - **Basic**: Rendered car with white background
- Have not tried Real and Composite together

# But I Don't Have a Model of My Gizmo

- Buy one: <http://turbosquid.com>, <http://blender-models.com>, <http://tf3dm.com>
- Make one:
  - Make it in Blender <http://www.blender.org/>
  - Hire an art student to make it in Blender / Maya / 3DS Max
  - Take pictures and turn into model (<http://www.123dapp.com/>)

# Can we use SIGHTT? How much does it cost?

- Not yet...release requires approval
- SIGHTT will be going Open Source
  - Source code available
  - Cloud CPU time depending on funding
- Undergoing active development now
  - If you want something, please ask
- Alpha in Nov/Dec
  - Let me know if you want to join
- Beta in Feb/Mar

- Hand generation of annotated data is time consuming and expensive
- Use existing data sources if you can
  - They likely don't have all the data you need
- SIGHTT will be able to produce data quickly and cheaply
- Probably useful for you
  - After release, will be easy to find out
  - Will get better over time
